DOOR OVERSIZE-S

STAINO & STAINO has developed systems for the manufacture of oversized doors, which can be made in particular architectural contexts that require massive doors, which cannot be achieved with the products normally on the market.

CUSTOMIZABLE IN EVERY ASPECT

Oversize-S doors have the ability to be customized by the customer in all their aspects, the opening control system, predisposition for coatings of any type and even the thickness of the door which can be made to measure.

THE SOLUTION TO HANDLING

Given the dimensions and weights of the OVERSIZE-S doors, we have developed a product construction system that allows assembly directly on site, in this way it is possible to handle single pieces of smaller size, reducing shipping costs and increasing the safety in the handling phases.

INSTALLATION AND ASSEMBLY

Given the tailoring of these products, the possible variables for the multiple customizations and the cost of these elements, for all the OVERSIZE-S, a real operation check is performed in the factory.

GUARANTEE OF QUALITY

The functional test involves the complete assembly of the doors in the factory in a wing that reproduces the situation on site, in this way all the characteristics required for each specific OVERSIZE-S are checked.

After this test, the door is disassembled to be shipped in several separate parts, the procedure is documented to facilitate assembly on site with specific instructions for each individual situation.

In case of need, STAINO & STAINO can support the customer in the installation phases with its own specialized technicians.
